System Engineer

- Coordinated the various tasks of system development – Planning, designing, and integration (including formal testing) and oversaw full transition into production.
- Worked on various third-party system components and in areas such as: development, migration, engineering, pre-sales, production, QA, operations and product management.
- Managed system configuration and its documentation to make sure planning and execution were run efficiently.
- Automated system monitoring tasks using standard observation tools.
- Worked closely with multiple partners to support product integration. Assisted in web-product deployment and internal documentation (diagrams and configuration notes).
- Was responsible for standard automatic monitoring and supervised corporate systems (examples here) and support services.
- Created schedules and prepared internal and data-system reports for backup management
